THE GREEN SWARM

Green Swarm: Greener Routes with Bio-inspired Techniques

ECO-FRIENDLY ROUTES

- ✓ Routes are customized for every driver
- ✓ Routes take into account the whole city
- ✓ Routes take into account time, distance, and pollution
- ✓ Routes evolve as drivers follow them

HUMAN TRAFFIC AUTHORITIES

- ✓ Grounded experts
- ✓ Knowledge of the city
- ✓ Years of experience
- ✓ They drive by the city's streets

HUMAN TRAFFIC AUTHORITIES

- ✓ Grounded experts
 - ✓ Knowledge of the city
 - ✓ Years of experience
 - ✓ They drive by the city's streets
-
- ✗ Bias in results
 - ✗ Personal preferences
 - ✗ Personal feelings
 - ✗ Hidden side effects
 - ✗ Time, effort, brain limitations to deal with all the details

REAL PROBLEM

- Minimizing greenhouse gas emissions, fuel consumption and travel times
- Actual cities are complex:
 - ▶ traffic lights
 - ▶ street lanes
 - ▶ roundabouts
 - ▶ left turns
 - ▶ type of vehicles
 - ▶ etc.
- Many possible routes
- Up to ...
 - ▶ 5800 vehicles
 - ▶ 89 traffic lights
 - ▶ 1314 route segments

SMART SOLUTION: EVOLUTIONARY TECHNIQUE

OUTPERFORMING HUMANS

Human Strategies:

- 20% less vehicles in streets
 - ✗ Does not reduce emissions
- 30 km/h maximum speed
 - ✗ Increase street congestion
- Replacing trucks by 50% more sedans and vans
 - ✗ More vehicles imply longer travel time

Green Swarm works better alone or combined with them:

- Up to ...
 - ✓ 67% shorter travel times
 - ✓ 81% less emissions
 - ✓ 52% fuel saving

IMPACT IN THE SOCIETY

- ✓ Traffic jam prevention
- ✓ Less pollution
- ✓ Less stressful trips
- ✓ Improvements on the economy of the city
- ✓ Healthy and happy citizens
